

# CrossWorlds

## Introduction

## CrossWorlds

CrossWorlds is a feature extension to IBM Websphere Liberty that gives direct Java access to a Domino server or Client. It requires:

- A Websphere Liberty feature that wraps OpenNTF Domino API and five Domino jar files.
- A variable with a path to a Domino server or Notes Client
- A j2eeenabler jar file in the build path of any application that wants to use the filter

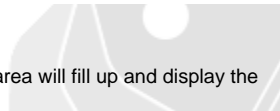

## IBM Websphere Liberty

IBM Websphere Liberty is a lightweight Java EE server, analogous to Apache Tomcat. It is free for development or test use, as well as for limited production use. It can be installed and configured in Eclipse via a plugin available in the Eclipse Marketplace. It can be set up within a few minutes. Websphere Liberty supports Java 8, unlike full Websphere or Domino<sup>1</sup>.
