

6.0.2 Release M6.2

Upgrade Information

Java error logging calls will need amending for **when migrating to 6.0.x from earlier releases**. All `OpenLogItem` static calls have been replaced with `com.paulwithers.openLog.OpenLogUtil` methods.

Variants of `OpenLogItem.logError()` and `OpenLogItem.logEvent()` need changing to `OpenLogUtil.logError()` and `OpenLogUtil.logEvent()`. Any other method calls to `OpenLogItem` will need amending to `OpenLogUtil.getOpenLogItem()`. Using DDE's Search functionality will allow a "find and replace".

SSJS error / event logging requires no amendments.

Full details of the fix in M6.2 can be found on the JIRA project: [JIRA M6.2 Release](#).

XOL-3 First character stripped from page when logged
