

6.0.1 Release M6.1

Upgrade Notes

Java error logging calls will need amending for **when migrating to 6.0.x from earlier releases**. All OpenLogItem static calls have been replaced with com.paulwithers.openLog.OpenLogUtil methods.

Variants of OpenLogItem.logError() and OpenLogItem.logEvent() need changing to OpenLogUtil.logError() and OpenLogUtil.logEvent(). Any other method calls to OpenLogItem will need amending to OpenLogUtil.getOpenLogItem(). Using DDE's Search functionality will allow a "find and replace".

SSJS error / event logging requires no amendments.

Full details of the fix in M6.1 can be found on the JIRA project: [JIRA M6.1 release](#)

#27 / XOL-2 Fix for erroneous reporting of database source of error in plugin
