

# Working with Internal users in Darwino

To work with UserProfiles in your App, you have retrieve the Instance of UserProfileStorageServiceImpl.

This Object exposes following usefull methods to work with UserProfiles:

Name	Parameter	Action	Returns
getEmail	email, session	Searches the UserProfile with the provided Email	The UserProfile or Null if nothing is found
getByUNID	unid, session	Searches atheUserProfile with the provided UNID	The UserProfile or Null if nothing is found
getByConfirmationId	confirmationId, session	Searches the UserProfile with the provided confirmationId	The UserProfile or Null if nothing is found
getMine	-	Searches the UserProfile of the current User	The UserProfile or Null if no User is logged in
isRegistered	UserProfile	Checks if the provided USerProfile is already registered	Boolean
save	UserProfile	Saves the provided UserProfile	Boolean indicating success
delete	UserProfile	Deletes the specified UserProfile	Boolean indicating success

TODO: Are there more methods which would be useful to administrate USerProfiles?

ex: getAll, getActive, getPending, confirm
