

SmartNSF

SmartNSF - Turn your IBM Notes Application into a Microservice within Minutes

Define in a single file all your routes and make the data and business logic of your IBM Notes Application as an easy to consume REST Service available.

SmartNSF is in Beta 7

Done and new in this release

- Some Bugfixes for CORS
- New default action called `?metrics` to provide metrics in the pro-metheus.io format

Changes in Beta 6

Done and new in this Release:

- CORS Support and some additions to the designer support

Changes in Beta 5

Done and new in this Release:

- CUSTOM strategy added

Changes in Beta 4

New features

- Swagger yaml definition file generation and SwaggerUI to browse it (use `?yaml` and `?swagger` at the end of the base url to access it)
- New `router.version` parameter added, usage: `router.version('1.0.0')`
- `VIEWENTRIES_BY_CATEGORY_PAGED` strategy has been added (and `non paged version` as well)
- First implementation of Code Assist in DDE

and of course some bugfixes.

Changes in Beta 3

Done and new in this Release:

- Several Bugfixes
- Rename of all Strategies (`SELECT` and `ALL` removed)
- New strategies to support ViewEntries - `VIEWENTRIES_PAGED` and `VIEWENTRIES`
- `PRE_SUBMIT` Event now with `context.getResultPayload()` (example in `discussion.nsf`)

Changes in BETA 2

Done and new in this Release:

- All basic strategies to select documents are implemented
- Integration to Designer is done
- Select ATTACHMENT for GET is implemented (experimental)
- Documentation has started
